GAS FLOW CHALLENGES IN POWER SYSTEM

Wednesday March 24, 2021 – At 1:02am on **Wednesday March 24, 2021**, a compressor fault upstream, reported by the Ghana Gas Company, led to the loss of 750MW of power from some generating plants; specifically, Karpowership and VRA's Aboadze units

The situation affected power supply to parts of the Greater Accra and Central regions, particularly Accra East, Winneba, Techiman and Sunyani.

The fault was rectified at 6:45am and power has since been restored to all affected areas in the country.
