GAS SUPPLY SHORTAGE IN TAKORADI ENCLAVE

Tuesday June 08, 2021 – A reported leakage by Ghana Gas on its processing plant at Takoradi, has curtailed gas supply to a number of thermal generating plants in the country.

A number of gas-fired generating plants were therefore shutdown on Monday June 7, 2021.

Consequently, this led to power outages in some parts of Greater Accra and Tema.

Repair works are currently ongoing by Ghana Gas to fix the situation.

GRIDCo wishes to assure its customers that it continues to engage all the players in the power sector value chain to ensure consistent power supply in the country.
